(d) Emerging Markets Risk - The fund may invest in emerging markets, where political, economic, legal and regulatory systems are less developed. As a result, investing in emerging markets may involve higher volatility and a greater risk of loss than investing in developed markets. In particular, where the fund invests in Variable Interest Entity (VIE) structures to gain exposure to industries with foreign ownership restrictions or invests in Chinese assets via Stock Connect / Bond Connect, there are additional operational risks, which are outlined in the prospectus.

(e) Derivatives Risk - The use of derivatives may involve additional liquidity, credit and counterparty risks. In some cases the risk of loss from derivatives may be increased where a small change in the value of the underlying investment may have a larger impact on the value of the derivative.

Derivative usage

- Derivatives are linked to the value of other assets. In other words, they derive their price from one or more underlying asset.
- Where derivatives are used, this would typically be to maintain allocations to equities while meeting cash inflows or outflows. Where these are large relative to the size of the fund, derivative usage may be significant for limited periods of time.
